Background Information

XRCC1 (X-ray Repair Cross Complementing group 1) is a molecular scaffold protein that interacts with multiple enzymatic components of DNA single-strand break repair (SSBR) including DNA kinase, DNA phosphatase, DNA polymerase, DNA deadenylase, and DNA ligase activities that collectively are capable of accelerating the repair of a broad range of DNA single-strand breaks (SSBs) (PMID: 18515191). XRCC1 is 633 amino acids in length which is comprised of an N-terminal domain (NTD) of ~160 amino acids that interacts with Pol β , a central BRCT domain of ~90 amino acids that interacts with PARP1 (PMID: 9584196). This antibody is not suitable for murine samples.
