Background Information

NGX6 (also known as TMEM88 or C9orf127) is a transmembrane protein containing an epidermal growth factor (EGF)-like domain. It may function as a regulator of the EGFR pathway. NGX6 has been reported as a tumor suppressor which may function in cell growth, proliferation and adhesion (PMID: 19755717; 12918109; 20705583).
