Background Information

GIRK2 (also known as Kir3.2), encoded by KCNJ6 gene, is a member of the G protein-coupled inwardly-rectifying potassium channel (GIRK, Kir3) family of inward rectifier potassium channels. GIRK channels are activated following stimulation of G protein-coupled receptors (PMID: 26422984). They play important roles in regulating cellular excitabilities in the heart and brain (PMID: 31043612). Mutations in KCNJ6 gene are associated with Keppen-Lubinsky Syndrome (PMID: 25620207).
