**Background Information** 

Protein arginine methyltransferases (PRMTs) are responsible for arginine methylation of histone or nonhistone  $proteins \ to \ regulate \ diverse \ biological \ processes, including \ cell \ proliferation, \ differentiation \ and \ senescence. \ PRMT7$ is expressed in both embryonic stem and germ cells and is implicated in maintenance of muscle stem cell function. overexpression of PRMT7 has been associated with cancer metastasis. PRMT7 automethylation at residue R531 was reported to enhance breast cancer metastasis.
