Background Information

IDE (INS-degrading enzyme) belongs to the peptidase M16 family. It is also known as insulysin and is a 110-kD neutral metallopeptidase that can degrade a number of peptides, including INS and beta-amyloid (PMID:9830016). The reduction of IDE expression may be a risk factor for AD, and that IDE may interact with APOE status to affect beta-amyloid metabolism (PMID:12507914). It can exist as a homodimer and form higher oligomers (PMID:17613531). This antibody is specific to IDE.
