Background Information

Meltrinβ(ADAM19) is a metalloprotease-disintegrin expressed in the peripheral nervous system and other organs during embryogenesis. Its specific patterns of expression during embryogenesis suggest that it is involved in the development of the peripheral nervous system, skeletal muscle, bone and heart tissue(PMID:12482604). It participates in the proteolytic processing of beta-type neuregulin isoforms which are involved in neurogenesis and synaptogenesis, suggesting a regulatory role in glial cell.
