Background Information

CCL4, also known as Macrophage inflammatory protein-1 β (MIP-1 β), is a CC chemokine with specificity for CCR5 receptors, and is one of the major HIV-suppressive factors produced by CD8+ T-cells. MIP-1 β is an acidic protein composed of 69 amino acids that is produced by many cells, particularly macrophages, dendritic cells, and lymphocytes. MIP-1 β is responsible for the activation of PMN and is involved in acute neutrophilic inflammation. Recombinant MIP-1 β induces a dose-dependent inhibition of different strains of HIV-1, HIV-2, and simian immunodeficiency virus (SIV).
