Background Information

fibronectin type III domain containing 5(FNDC5) encodes 23kDa protein, which is a membrane protein that is cleaved and secreted as a newly identified hormone, irisin. The exercise induces muscle FNDC5 expression. Exercise-induced FNDC5 gene expression in muscles was accompanied by a parallel increase in the concentration of circulating irisin, which in turn activates adipocyte thermogenic programs, leading to mitochondrial heat production and energy expenditure.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 23995-1-AP (FND5 antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

Immunohistochemical analysis of paraffin-embedded mouse skeletal muscle tissue slide using 23995-1-AP (FND5 antibody) at dilution of 1:400 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
