Background Information

SLC36A4 (also known as proton-coupled amino-acid transporter 4, PAT4), is a member of the solute carrier (SLC) 36 family which functions as transporter for amino acids and derivatives. SLC36A4 is widely distributed at the mRNA level in normal tissues and many cancer cell lines. It modulates the mTORC1 signaling and is essential for the proliferation of cancer cells. In addition, small GTPase Rab12 controls the degradation of SLC36A4, which indirectly modulates mTORC1 activity and autophagy. This antibody can recognize the endogenous SLC36A4 protein in multiple cell lines.
