Background Information

MBNL3, also named as Muscleblind-like protein 3 or Cys3His CCG1-required protein, is a 354 amino acid protein, which contains four C3H1-type zinc fingers and belongs to the muscleblind family. MBNL3 localizes in the nucleus and is highly expressed in the placenta. MBNL3 mediates pre-mRNA alternative splicing regulation and plays a role in myotonic dystrophy pathophysiology. MBNL3 could inhibit terminal muscle differentiation, acting at approximately the time of myogenin induction.
