Background Information

CTGF, also known as CCN2, is a member of the CCN family of matricellular proteins. CTGF, a cysteine-rich, matrix-associated, heparin-binding protein, is widely expressed in various human tissues and organs. CTGF has important roles in many biological processes, including cell adhesion, migration, proliferation, angiogenesis, skeletal development, and tissue wound repair, and is critically involved in fibrotic disease and several forms of cancers.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 25474-1-AP (CTGF antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours.

Various lysates were subjected to SDS PAGE followed by western blot with 25474-1-AP (CTGF antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours.

1X10⁶ HU7 cells were intracellularly stained with 0.4 ug Anti-Human CTGF (25474-1-AP) and CoraLite®488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L) at dilution 1:1000 (red), or 0.4 ug Isotype Control. Cells were fixed with 4% PFA and permeabilized with Flow Cytometry Perm Buffer (PF00011-C).
