Background Information

Coiled-coil domain containing 106 (CCDC106) is a protein containing 280 amino acids with a molecular weight of 32 kDa. The coiled-coil domain is involved in molecular recognition, DNA binding and secretion. CCDC106 was identified as a p53-interacting partner by automated yeast two-hybrid screening, but its sequence and interaction with p53 have not been further confirmed. Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 25965-1-AP (CCDC106 antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 25965-1-PBS in a different storage buffer formulation.
