Background Information

Interleukin-1, produced mainly by blood monocytes, mediates the panoply of host reactions collectively known as $acute\ phase\ response.\ It\ is\ identical\ to\ endogenous\ pyrogen.\ The\ multiple\ biologic\ activities\ that\ define\ IL1\ are$ properties of a 15- to 18-kD protein that is derived from a 30- to 35-kD precursor. Interleukin 1β (IL-1B) is a member of the interleukin 1 cytokine family. It is a pro-inflammatory cytokine against infection, playing an important role in the pathogenesis of cancers. It signals through various adaptor proteins and kinases that lead to activation of numerous downstream targets.
