Background Information

OAT1, also named as SLC22A6, has two GXXXG motifs in its transmembrane which is associated with protein processing and oligomerization of other proteins. OAT1 is involved in the renal elimination of endogenous and exogenous organic anions. It has been reported that OAT1 plays a key role in clearing endogenous metabolites, toxins and drugs from blood. OAT1 has some isoforms and the calculated MW ranges from 55 kDa to 62 kDa. 26574-1-AP antibody detects the 60-65 kDa (native forms) and 70-80 kDa (mature forms) protein in SDS-PAGE.
