Background Information

CRB1, also known as protein crumbs homolog 1, is homologous to Drosophila Crumbs, a protein that is essential for establishing and maintaining apico-basal polarity in epithelia derived from the ectoderm (PMID: 2344615). CRB1 protein is a single transmembrane protein with a large extracellular part, containing three laminin A G domains and 19 epidermal growth-factor-like domains (PMID: 15494026, 18407265, 11734541). The expression of CRB1 is restricted to the retina and brain (PMID: 10508521). Mutations in CRB1 gene cause severe retinal dystrophies, ranging from retinitis pigmentosa (RP) to Leber congenital amaurosis (LCA) (PMID: 11734541).
