Background Information

Pannexins (Panx) are proteins homologous to the invertebrate gap junction proteins called innexins (Inx) and are traditionally described as transmembrane channels. Three distinct Panx paralogs (Panx1, Panx2 and Panx3) have been identified in vertebrates. Previous reports on Panx expression and functionality are focused primarily on Panx1 and Panx3 proteins. The exact function of Panx2 remains elusive. Catalog#26604-1-AP specially recognizes the 70 kDa Panx2.
