Background Information

DTW domain-containing protein 1 (DTWD1), also named as tRNA-uridine aminocarboxypropyltransferase 1, is responsible for 3-(3-amino-3-carboxypropyl)uridine modification at position 20 in the D-loop of certain tRNAs (PMID: 31804502; 37745798). DTWD1 has been identified as a target gene of p53 and functions as a tumor suppressor gene (PMID: 25973305). Dysregulated expression of DTWD1 has been reported in several malignancies, including gastric cancer and colorectal cancer (PMID: 25973305; 31924336).
