## Background Information

Suppression of tumorigenicity 14(ST14), is an epithelial-derived, integral membrane serine protease. ST14 forms a complex with the Kunitz-type serine protease inhibitor, HAI-1, and is found to be activated by sphingosine 1-phosphate. ST14 can cleave and activate hepatocyte growth factor/scattering factor, and uPA, which suggest the function of this protease as an epithelial membrane activator for other proteases and latent growth factors.
