Background Information

Etratricopeptide repeat and ankyrin repeat containing 1 (TRANK1), has been confirmed as the susceptibility gene for BD (bipolar disorder). An integrated analysis of mRNA co-expression networks revealed that genes highly correlated with TRANK1 were significantly involved in the biological processes related to synaptic plasticity, dendritic spine, axon guidance and circadian rhythm. In addition, TRANK1 rs71947856 variant was associated with circadian regulation and Kleine-Levin syndrome, which is a rare disease characterized by severe episodic hypersomnia, with cognitive impairment and apathy or disinhibition.(PMID: 34014031)
