| Background Information | CYFIP1 is a protein that regulates cytoskeletal dynamics and protein translation. The encoded protein is a component of the WAVE regulatory complex (WRC), which promotes actin polymerization. This protein also interacts with the synaptic functional regulator FMR1 protein and translation initiation factor $4 E$ to inhibit protein translation. A large chromosomal deletion including this gene is associated with increased risk of schizophrenia and epilepsy in human patients. Reduced expression of this gene has been observed in various human cancers and the encoded protein may inhibit tumor invasion. |  |  |
| Storage | Storage: |  |  |
|  | Store at $-20^{\circ} \mathrm{C}$. Stable for one year after shipment. |  |  |
|  | Storage Buffer: |  |  |
|  | PBS with $0.02 \%$ sodium azide and $50 \%$ glycerol pH 7.3. |  |  |
|  | Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage |  |  |
| *** 20ul sizes contain 0.1\% BSA |  |  |  |

[^0]This product is exclusively available under Proteintech

Selected Validation Data

Various lysates were subjected to SDS PAGE
followed by western blot with 27925-1-AP (CYFIP1
antibody) at dilution of 1:1500 incubated at room
temperature for 1.5 hours.
