Background Information

Thrombospondin type-1 domain-containing protein 7A (THSD7A) is a membrane-associated N-glycoprotein with a molecular weight of 250 kDa, which can be cleaved to release a 210-kDa soluble form (PMID: 22194972; 27214550). THSD7A has a role in angiogenesis. It mediates endothelial cell migration and tube formation (PMID: 2002048). THSD7A has been identified as a second autoantigen involved in adult idiopathic membranous nephropathy in addition to PLA2R1 (PMID: 25394321).
