Background Information

The large tumour suppressor 1 (LATS1) acting as a tumour suppressor is a serine/threonine kinase of the AGC kinase family and is found to be down-regulated in various types of human cancers. Recently, LATS1 has been identified as a central player of the emerging tumour suppressive Hippo signaling pathway. In this pathway, the MST1/2 kinase phosphorylates activates LATS1/2 which, together with its co-factor MOB1, subsequently phosphorylates and inhibits the YAP transcriptional factor by preventing them from translocating to the nucleus. The antibody also detects the phosphorylated at Thr1041 of the LATS2. (PMID: 32460168, PMID: 30219064, PMID: 31792377)
