Background Information
TBC1D1 belong to the family of RabGAPs and its physiological roles inglucose homeostasis and its implication in human diseases have already been characterized in skeletal muscle and adipocytes in a large number of independent studies. TBC1D1 including twophospho-tyrosine-binding (PTB) domains, a calmodulin-binding domain(CBD) and the func-tional GAP domain responsible for catalyzing GTP hydrolysis. TBC1D1 is phosphorylated by AMPK at Ser660 and Thr237, and by AKT at Thr596. The RabGAPs TBC1D1 is important regulators of glucose homeostasis inskeletal muscle and adipose tissue. Storage
Storage:
Store at $-20^{\circ} \mathrm{C}$.
Storage Buffer:
PBS with $0.02 \%$ sodium azide, $50 \%$ glycerol pH 7.3 and $0.05 \%$ BSA
Aliquoting is unnecessary for $-20^{\circ} \mathrm{C}$ storage

Selected Validation Data

Non-treated HeLa and Calyculin A treated HeLa
cells were subjected to SDS PAGE followed by
western blot with 29034-1-AP (Phospho-TBC1D1 (Ser660) antibody) at dilution of 1:10000 incubated at room temperature for 1 hours.
