Background Information

TMEM66/SOCE-associated regulatory factor (SARAF) is an endoplasmic reticulum (ER)-resident transmembrane protein that promotes SOCE inactivation and prevents Ca²⁺ overfilling of the cell. TMEM66 plays a key role in shaping cytosolic Ca²⁺ signals and determining the content of the major intracellular Ca²⁺ stores, which is probably important in protecting the cell from Ca²⁺ overfilling (PMID: 37007714). TMEM66 is a highly conserved protein in vertebrates. In mammals, TMEM66 is ubiquitously expressed, but has significantly high transcript levels in the immune and neuronal tissues (PMID: 25469256). Moreover, TMEM66 is an androgen-responsive marker for prostate cancer and mTOR-dependent cardiac growth (PMID:32173353).
