Background Information

ENT1 (equilibrative nucleoside transporter 1; also known as SLC29A1) is a ubiquitous protein located at the cell membrane and is a major transporter responsible for the cellular uptake and release of endogenous nucleosides such as adenosine, and nucleoside analogs used in chemotherapy. The predicted molecular weight of ENT1 is 50 kDa, while heavier 54-68 kDa band may be observed due to the glycosylation (16448802, 11850433, 16111480). A smaller novel splice variant of the mouse ENT1 has also been identified, which generates a protein of 35-40 kDa (18413666).
