Background Information

ATPase plasma membrane Ca²⁺ transporting 1 (ATP2B1, also known as plasma membrane Ca²⁺ pump isoform 1; PMCA1) belongs to the family of ATP-driven calmodulin-dependent Ca²⁺ pumps that participate in the regulation of intracellular free Ca²⁺ (PMID:35358416). The ATP2B1 contents of extracellular vesicles are increased in prostate cancer treated with enzalutamide and are negatively regulated by androgen receptors (PMID:29105980). ATP2B1 plays an important role in the prognosis of cholangiocarcinoma. Furthermore, ATP2B1 plays an important role in the prognosis of cholangiocarcinoma and can be a prognostic factor for cholangiocarcinoma (PMID:35875160).
