Background Information

Mixed lineage kinase domain-like pseudokinase (Mlkl) belongs to the protein kinase superfamily and has two MWs of 54 and 30 kDa. Mlkl plays a critical role in tumor necrosis factor (TNF)-induced necroptosis, a programmed cell death process, via interaction with receptor-interacting protein 3 (RIP3), which is a key signaling molecule in the necroptosis pathway. High levels of this protein and RIP3 are associated with inflammatory bowel disease in children.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 30145-1-AP (MLKL antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 30145-1-PBS in a different storage buffer formulation.

Various lysates were subjected to SDS PAGE followed by western blot with 30145-1-AP (MLKL antibody) at dilution of 1:2000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 30145-1-PBS in a different storage buffer formulation.

Immunofluorescent analysis of (-20°C Ethanol) fixed NIH/3T3 cells using MLKL antibody (30145-1-AP) at dilution of 1:400 and CoraLite®488-Conjugated AffiniPure Goat Anti-Rabbit IgG(H+L). This data was developed using the same antibody clone with 30145-1-PBS in a different storage buffer formulation.
