Background Information

Gamma-glutamyltransferase 5 (GGT5) is one of the two GGT family members (GGT1 and GGT5) with catalytic activity identified to date and was first reported in 2008 (PMID:18357469). GGT5 is widely distributed in a variety of tissues, with relatively high expression in liver, kidney, and alveolar macrophages (PMID:25377544). GGT5 played a pivotal role in oxidative regulation, drug metabolism, and immune modulation in the human body (PMID:21447318).
