## Background Information

Solute carrier family 7 member 2 (SLC7A2), also known as CAT2, is a member of the solute carrier superfamily. It functions as a cationic amino acid transporter, which can transport cationic amino acids (arginine, lysine and ornithine) into the cytosol and regulate inflammation (PMID: 35152203). It has been shown that lower SLC7A2 expression is associated with worse prognosis of ovarian cancer and hepatocellular carcinoma (PMID: 34108444; 32647070), and SLC7A2 deficiency in inflammatory bowel tissues increases the risk of inflammation-associated colon tumorigenesis (PMID: 30202097)
