Background Information

TFPI2 (tissue factor pathway inhibitor 2), also known as PP5. It is expected to be located in extracellular space, and the protein is enriched in the placenta. This gene encodes a member of the Kunitz-type serine proteinase inhibitor family. The protein can inhibit a variety of serine proteases including factor VIIa/tissue factor, factor Xa, plasmin, trypsin, chymotrypsin and plasma kallikrein. This gene has been identified as a tumor suppressor gene in several types of cancer. The molecular weight of TFPI2 is 27 kDa, and it can recognize the band of 36 kDa (PMID: 21421890).
