## Background Information

ECM1 (extracellular matrix protein 1), also known as URBWD. It is located in Secreted, extracellular space, and extracellular matrix, which is mainly expressed in esophagus and gall bladder. The gene encodes a soluble protein that is involved in endochondral bone formation, angiogenesis, and tumor biology. It also interacts with a variety of extracellular and structural proteins, contributing to the maintenance of skin integrity and homeostasis. Mutations in this gene are associated with lipoid proteinosis disorder (also known as hyalinosis cutis et mucosae or Urbach-Wiethe disease) that is characterized by generalized thickening of skin, mucosae and certain viscera. Alternatively spliced transcript variants encoding distinct isoforms have been described for this gene. The calculated molecular weight of ECM1 is 60 kDa, and this antibody can recognize the 63 kDa isoform of target.

## Storage

**Storage:**  
Store at -20°C. Stable for one year after shipment.  
**Storage Buffer:**  
PBS with 0.02% sodium azide and 50% glycerol pH 7.3.  
Aliquoting is unnecessary for -20°C storage

\*\*\* 20ul sizes contain 0.1% BSA

## Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 30725-1-AP (ECM1 antibody) at dilution of 1:1000 incubated at room temperature for 1.5 hours.
