Background Information

2-oxoglutarate and iron-dependent oxygenase domain-containing protein 1 (OGFOD1) is a proly hydroxylase which belongs to 2-OG-Fe (II) dioxygenase family, it also namely KIAA1612 and TPA1. OGFOD1 is expressed in many tissues, mainly located in the nucleoplasm. It increased in many cancers and regulates both transcription and translation. The apparent molecular weight is larger than the calculated molecular weight of 63 kDa, which is likely due to posttranslational modification, presumably by glycosylation.
