Background Information

Cdc42 binding protein kinase alpha (Cdc42BPA/MRCKa), is a member of the serine/threonine protein kinase family. Previous studies suggested that Cdc42BPA may mediate the Cdc42-induced peripheral actin formation to promote cytoskeletal reorganization. However, the biological function and clinical significance of Cdc42BPA in colon cancer are unclear. (PMID: 29072916)

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 31297-1-AP (CDC 42BP4 antibody) at dilution of 1:4000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 31297-1-PBS in a different storage buffer formulation.
