Background Information

SPATS2, also known as SCR59 and SPATA10, is a member of the RNA-binding proteins whose aberrant expression is associated with carcinogenesis in several types of cancer. It is mainly expressed in the adult testis, with low expression in liver and other tissues (PMID: 33037180). The apparent molecular weight is higher than the calculated molecular weight of 60 kDa, probably due to post-translational modification, probably by phosphorylation.
