Background Information

Zinc finger and SCAN domain-containing protein 2 (ZSCAN2, also known as ZFP29 and ZNF854) plays an important role in the maintenance of the SSC (spermatogonial stem cells) pool in vitro and is integral for robust regeneration of spermatogenesis in vivo following exposure to clastogens. Loss of ZSCAN2 expression alters key cellular processes in undifferentiated spermatogonia, such as translation, chromatin modification, and ubiquitin conjugation (PMID: 35244684).
