Background Information

Arrest-type spermatogenic failure refers to the arrest of spermatogenesis at a specific stage, such as spermatogonia, spermatocytes, or spermatids. It is mainly caused by genetic factors, particularly variants in key spermatogenic genes (e.g., TEX11, MSH5, C3ORF62, MEI1, etc.), and represents one of the most distinctive forms of male infertility (PMID: 41669890). The C3orf62 is essential for normal spermatogenesis and male fertility (PMID: 33064489; 38175751).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 32718-1-AP (C3orf62 antibody) at dilution of 1:3000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 32718-1-PBS in a different storage buffer formulation.
