## PPIA-Specific Polyclonal antibody

Catalog Number:35001-1-AP

1 Publications

Basic Information	Catalog Number: 35001-1-AP	GenBank Accession Number: NM_021130	Purification Method: Antigen affinity purification	
	Size: 150ul, Concentration: 133 µg/ml by Bradford method using BSA as the standard; Source: Rabbit Isotype: IgG	5478	Recommended Dilutions:	
			WB 1:500-1:3000	
		UNIPROT ID: P62937		
		Full Name: peptidylprolyl isomerase A (cyclophilin A)		
				Calculated MW:
		18 kDa		
		Observed MW: 18 kDa		
		Applications	Tested Applications: WB, ELISA	Positive Controls:
WB : NIH3T3 cells, Cited Applications: WB			3T3 cells,	
Species Specificity: human, mouse, rat				
Cited Species: human				
Rackground Information	PPIA, also named as CYPA and Rotamase A, belongs to the cyclophilin-type PPIase family and PPIase A subfamily. PPIases accelerate the folding of proteins. It catalyzes the cis-trans isomerization of proline imidic peptide bonds ir oligopeptides. PPIA forms a trimolecular complex with cyclophilin and calcineurins to inhibit calcineurin phosphatase activity. PPIA is incorporated into the virion of the type 1 human immunodeficiency virus (HIV-1) via a direct interaction with the capsid domain of the viral Gag polyprotein and is crucial for efficient viral replication. This antibody is immunized with full length gene PPIA and absorbed by PPIF. So this antibody is specific to PPIA.			
Background Information	phosphatase activity. PPIA is incorpo direct interaction with the capsid dom	main of the viral Gag polyprotein	human immunodeficiency virus (HIV-1) via a and is crucial for efficient viral replication.	
Notable Publications	phosphatase activity.
