Background Information

Syntaxin 2 (STX2), also named as EPIM, STX2A, STX2B and STX2C, belongs to the syntaxin family. It is essential for epithelial morphogenesis. STX2 is a member of the SNARE membrane fusion machinery which localized to the midbody during cytokinesis in rat and canine kidney cell lines. Inhibition of STX2 and Vamp8 function by overexpression of nonmembrane-anchored mutants caused failure of cytokinesis leading to the formation of binucleated cells. Time-lapse microscopy showed that only midbody abscission and not further upstream events, such as furrowing, were affected. The antibody is specific to STX2.

Selected Validation Data

A431 cells were subjected to SDS PAGE followed by western blot with 55033-1-AP (Syntaxin 2 antibody) at dilution of 1:800 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of (-20°C Ethanol) fixed HeLa cells using 55033-1-AP (Syntaxin 2 antibody) at dilution of 1:50 and Alexa Fluor 488-conjugated Goat Anti-Rabbit IgG(H+L).
