Background Information	Haploid germ cell-specific nuclear protein kinase (Haspin, alias GSG2) is an atypical eukaryotic protein kinase that was for a long time considered an inactive pseudokinase due to the low degree of structural homology of GSG2 with the 'classical' protein kinases (PMID: 29698892). GSG2 is a serine/threonine kinase that associates with chromosomes and phosphorylates threonine 3 of histone 3 during mitosis (PMID: 32439830).
