For Research Use Only

Phospho-JNK (Thr183/Tyr185) Monoclonal antibody Catalog Number:60666-1-Ig 1 Publications

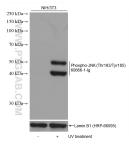

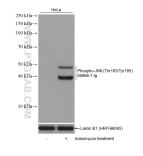

Basic Information	Catalog Number: 60666-1-lg	GenBank Accession N NM_138982	lumber:	Purification Method: Protein A purification	
	Size: 100ul , Concentration: 1000 ug/ml by Nanodrop; Source: Mouse Isotype: IgG2b	GenelD (NCBI): 5599		CloneNo.:	
				2H8F12	
		UNIPROT ID: P45983 Full Name:		Recommended Dilutions: WB 1:5000-1:50000 IHC 1:200-1:1000	
					mitogen-activated protein kinase 8 Calculated MW:
		48 kDa			
		Observed MW: 42 kDa, 50 kDa			
		Applications	Tested Applications:		Positive Controls:
	WB, IHC, ELISA			WB : HeLa cells, HEK-293 cells, NIH/3T3 cells, HSC-To cells, UV treated HEK-293 cells, UV treated NIH/3T3 cells, UV treated HSC-T6 cells, Anisomycin treated	
Cited Applications:					
WB					
Species Specificity: human, mouse, rat			HeLa cells IHC : Jurkat cells.		
Cited Species:					
mouse					
	TE buffer pH 9.0; (*) Alternativ	ielv antiaen			
	retrieval may be performed w buffer pH 6.0				
Background Information	retrieval may be performed w buffer pH 6.0 MAPK8(Mitogen-activated protein kir kinase subfamily. The JNK gene gene the JNK gene has or does not have a C dual phosphorylation at a Thr-Pro-Tyr to UV results in transcriptional activa	ith citrate hase 8) is also named a crates 10 forms of JNK t COOH terminal, resulti motif during response tion of c-Jun. The antik	through alternat ng in 46 kDa an to UV light. Pho body can detect	ive splicing, and the protein encoded d 54 kDa proteins. MAPK8 is activated osphorylation of these sites in respons endogenous levels of p46 and p54	
	retrieval may be performed w buffer pH 6.0 MAPK8(Mitogen-activated protein kir kinase subfamily. The JNK gene gene the JNK gene has or does not have a C dual phosphorylation at a Thr-Pro-Tyn to UV results in transcriptional activa SAPK/JNK when phosphorylated at Th	ith citrate hase 8) is also named a crates 10 forms of JNK t COOH terminal, resulti motif during response tion of c-Jun. The antik	through alternat ng in 46 kDa an e to UV light. Pho oody can detect ll also react wit	SAPK1, SAPK1C and belongs to the MA ive splicing, and the protein encoded d 54 kDa proteins. MAPK8 is activated sphorylation of these sites in respons endogenous levels of p46 and p54 n JNK singly phosphorylated at Thr183 Application	
Background Information	retrieval may be performed w buffer pH 6.0 MAPK8(Mitogen-activated protein kir kinase subfamily. For technical support and original validation data for this product please contact: T: 1 (888) 4PTGLAB (1-888-478-4522) (toll free E: proteintech@ptglab.com in USA), or 1(312) 455-8498 (outside USA) W: ptglab.com

This product is exclusively available under Proteintech Group brand and is not available to purchase from any other manufacturer.

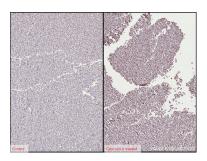

Selected Validation Data

Non-treated and UV treated NIH/3T3 cells were subjected to SDS PAGE followed by western blot with 60666-1-lg (Phospho-JNK (Thr183/Tyr185) antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and re-blotted with Lamin B1 (HRP-66095) antibody as a loading control.

Non-treated and Anisomycin treated HeLa cells were subjected to SDS PAGE followed by western blot with 60666-1-1g (Phospho-JNK (Thr183/Tyr185) antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and re-blotted with Lamin B1 (HRP-66095) antibody as a loading control.

Immunohistochemical analysis of paraffinembedded Jurkat cells slide using 60666-1-1g (Phospho-JNK (Thr183/Tyr185) antibody) at dilution of 1:1000 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
