## For Research Use Only

## Anti-Mouse PD-1/CD279 (J43.1)

Catalog Number: 65120-1-Ig

**Basic Information** 

Catalog Number:

65120-1-lg

500ug , 0.5 mg/ml

Source:

Size:

Armenian Hamster Isotype:

GenBank Accession Number:

BC119179 GeneID (NCBI):

18566

**UNIPROT ID:** Q02242 Full Name:

programmed cell death 1

**Purification Method:** Affinity purification

CloneNo.: J43.1

**Applications** 

**Tested Applications:** 

Species Specificity:

Mouse

## **Background Information**

Programmed cell death 1 (PD-1, also known as CD279) is an immunoinhibitory receptor that belongs to the CD28/CTLA-4 subfamily of the Ig superfamily. It is a 288 amino acid (aa) type I transmembrane protein composed of one Ig superfamily domain, a stalk, a transmembrane domain, and an intracellular domain containing an immunoreceptor tyrosine-based inhibitory motif (ITIM) as well as an immunoreceptor tyrosine-based switch motif (ITSM) (PMID: 18173375). PD-1 is expressed during thymic development and is induced in a variety of hematopoietic cells in the periphery by antigen receptor signaling and cytokines (PMID: 20636820). Engagement of PD-1 by its ligands PD-L1 or PD-L2 transduces a signal that inhibits T-cell proliferation, cytokine production, and cytolytic function (PMID: 19426218). It is critical for the regulation of T cell function during immunity and tolerance. Blockade of PD-1 can overcome immune resistance and also has been shown to have antitumor activity (PMID: 22658127; 23169436).

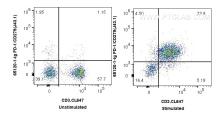

Storage

Storage:

Store at 2-8°C. Stable for one year after shipment.

PBS with 0.09% sodium azide.

## Selected Validation Data

1x10^6 unstimulated or anti-CD3/CD28 stimulated (2 days) mouse splenocytes were surface stained with 0.5 ug Anti-Mouse PD-1/CD279 (65120-1-lg, Clone: J43.1) and FITC Goat anti-hamster (Armenian) IgG Antibody at dilution 1:100, and 0.5 ug CoraLite® Plus 647 Anti-Mouse CD3 (17A2) (CL647-65077, Clone: 17A2). Cells were not fixed.
