Background Information

Proliferation of T lymphocytes is triggered by the interaction of IL-2 with its specific receptor following T lymphocyte activation. The receptor for IL-2 has three forms, generated by different combinations of three different proteins, the alpha chain (IL-2R alpha), the beta chain (IL-2R beta), and the gamma chain (IL-2R gamma) (PMID: 8476561). IL-2R alpha (also known as CD25) is a type I transmembrane protein present on activated T cells, activated B cells, some thymocytes, myeloid precursors, and oligodendrocytes. CD25 is also found on natural CD4+Foxp3+ Treg cells (PMID: 22585674).

Selected Validation Data

1x10^6 untreated or anti-CD3/CD28 treated mouse splenocytes were surface stained with 0.25 ug Anti-Mouse CD25/IL-2RA (PC61.5) Rat RecAb (65700-1-TR, Clone: PC61.5) and Fluorescein (FITC)-conjugated Goat Anti-Rat IgG(H+L). Cells were then stained with CoraLite® Plus 647 Anti-Mouse CD4. Cells were not fixed. This data was developed using the same antibody clone with 65700-1-PBS in a different storage buffer formulation.
