## Background Information

RBBP9, also named as BOG, RBBP10, RBBP-9, RBBP-10 and Protein BOG, belongs to the RBBP9 family. It may play a role in the transformation process due to its capacity to confer resistance to the growth-inhibitory effects of TGF-β1 through interaction with retinoblastoma and the subsequent displacement of E2F-1. RBBP9 is a tumor-associated serine hydrolase activity required for pancreatic neoplasia. It mediates suppression of TGF-β signaling is required for E-cadherin expression as loss of the serine hydrolase activity leads to a reduction in E-cadherin levels and a concomitant decrease in the integrity of tumor cell–cell junctions..RBBP9 protein levels were equivalent in paired primary tumor and nonneoplastic specimens(PMID:20080647)

## Selected Validation Data

A549 cells were subjected to SDS PAGE followed by western blot with 66015-1-Ig (RBBP9 antibody) at dilution of 1:500 incubated at room temperature for 1.5 hours.

Immunofluorescent analysis of HeLa cells, using RBBP9 antibody 66015-1-Ig at 1:25 dilution and Rhodamine-labeled goat anti-mouse IgG (red).

Immunohistochemical analysis of paraffin-embedded human pancreas cancer tissue slide using 66015-1-Ig (RBBP9 Antibody) at dilution of 1:200 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Immunohistochemical analysis of paraffin-embedded human pancreas cancer tissue slide using 66015-1-Ig (RBBP9 Antibody) at dilution of 1:200 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).
