Background Information

LIPH(Lipase member H) is also named as LPDLR, MPAPLA1, PLA1B. It is a phosphatidic acid-selective phospholipase A1 (PLA1) that produces 2-acyl lysophosphatidic acid (LPA) and belongs to the AB hydrolase superfamily and Lipase family. LIPH has a 12-residue lid region, which likely covers a catalytic pocket, and 4 potential N-linked glycosylation sites. Defects in LIPH are the cause of hypotrichosis type 7 (HYPT7).
