## Background Information

Catalase belongs to the catalase family. CAT occurs in almost all aerobically respiring organisms and serves to protect cells from the toxic effects of hydrogen peroxide. CAT promotes the growth of cells including T-cells, B-cells, myeloid leukemia cells, melanoma cells, mastocytoma cells, and normal and transformed fibroblast cells. CAT catalyzes the reaction:  $2\text{H}_2\text{O}_2 = \text{O}_2 + 2\text{H}_2\text{O}$ . Defects in CAT are the cause of acatalasia (ACATLAS) which is also known as acatalasemia.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 66765-1-Ig (Catalase antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated GAPDH Monoclonal antibody (HRP-60004) as loading control.
