| Background Information   | CD8 is a transmembrane glycoprotein that is predominantly expressed on the surface of cytotoxic T cells, and can<br>also be found on natural killer cells, cortical thymocytes, and dendritic cells. CD8 serves as a co-receptor for the T<br>cell receptor (TCR). Both CD8 and TCR recognize antigens displayed by an antigen presenting cell (APC) in the<br>context of class I MHC molecules. CD8 plays a role in T cell development and activation of mature T cells. This<br>antibody is raised against 23-183 aa of human CD8a, the alpha chain of CD8 molecule. |                                                  |                                                                           |                                                                                                                                                                        |  |

## Selected Validation Data

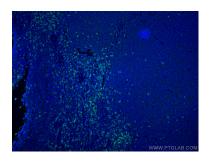

MOLT-4 cells were subjected to SDS PAGE followed by western blot with 66868-1-Ig (CD8a antibody) at dilution of 1:5000 incubated at room temperature for 1.5 hours.

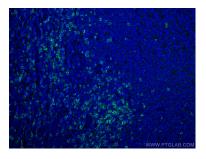

Immunohistochemical analysis of paraffinembedded human tonsillitis tissue slide using 66868-1-1g (CD8a antibody) at dilution of 1:20000 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

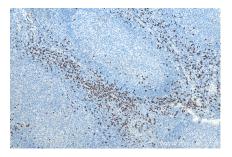

Immunohistochemical analysis of paraffinembedded human tonsillitis tissue slide using 66868-1-1g (CD8a antibody) at dilution of 1:20000 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0).

Immunofluorescent analysis of (4% PFA) fixed human tonsillitis tissue using CD8a antibody (66868-1-Ig, Clone: 1G2B10) at dilution of 1:400 and Coralite®488-Conjugated AffiniPure Goat Anti-Mouse IgG(H+L).
