Background Information

L1CAM, also known as NCAM-L1 or CD171, is a cell adhesion molecule of the immunoglobulin superfamily. It is a 200-220 kDa transmembrane glycoprotein composed of six Ig-like domains and five fibronectin type III repeats followed by a transmembrane region and a highly conserved cytoplasmic tail (PMID: 3412448; 22796939). L1CAM is primarily expressed in the nervous system and is involved in neuron-neuron adhesion, neurite fasciculation, outgrowth of neurites, cerebellar granule cell migration, neurite outgrowth on Schwann cells and interactions among epithelial cells of intestinal crypts (PMID: 3412448; 10767310). L1CAM is overexpressed in many human cancers and is often associated with bad prognosis (PMID: 27267927; 26111503).

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 67115-1-Ig (L1CAM antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. This data was developed using the same antibody clone with 67115-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human brain tissue slide using 67115-1-Ig (L1CAM antibody) at dilution of 1:500 (under 10x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 67115-1-PBS in a different storage buffer formulation.

Immunohistochemical analysis of paraffin-embedded human brain tissue slide using 67115-1-Ig (L1CAM antibody) at dilution of 1:500 (under 40x lens). Heat mediated antigen retrieval with Tris-EDTA buffer (pH 9.0). This data was developed using the same antibody clone with 67115-1-PBS in a different storage buffer formulation.

Immunofluorescent analysis of (4% PFA) fixed mouse brain tissue using L1CAM antibody (67115-1-Ig, Clone: 3H7B9) at dilution of 1:400 and CoraLite®488-Conjugated AffiniPure Goat Anti-Mouse IgG(H+L). This data was developed using the same antibody clone with 67115-1-PBS in a different storage buffer formulation.
