Background Information

PITX2 belongs to the bicoid class of homeodomain transcription factors, which play essential roles in embryonic development. Various PITX2 isoforms are involved in a wide variety of developmental programs, including left-right signaling. It controls cell proliferation in a tissue-specific manner and is involved in morphogenesis. During embryonic development, PITX2 is involved in the expansion of muscle progenitors. In addition, it may play a role in the proper localization of asymmetric organs such as the heart and stomach. PITX2 can be bound by some other proteins, and are part of a much larger atrial transcriptional complex. This antibody specifically recognizes isoform PTX2C.

Selected Validation Data

Various lysates were subjected to SDS PAGE followed by western blot with 67201-1-Ig (PITX2 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours. The membrane was stripped and reblotted with HRP-conjugated Beta Actin Monoclonal antibody (HRP-66009) as loading control.

HEK-293 cells were subjected to SDS PAGE followed by western blot with 67201-1-Ig (PITX2 antibody) at dilution of 1:10000 incubated at room temperature for 1.5 hours.
