## Background Information

SET, also named as IGAAD, I-2PP2A, TAF-I, IGAAD and PHAPII, belongs to the nucleosome assembly protein (NAP) family. SET is a multifunctional oncoprotein which is ubiquitously expressed in all kinds of cells. The SET protein participates in many cellular processes including cell cycle, cell migration, apoptosis, transcription, and DNA repair. The SET protein plays important roles in facilitating cell proliferation via many pathways that promote tumorigenesis and metastasis.
