Background Information

MEN1, also named as Menin or MEI1, is a tumor suppressor protein encoded by the MEN1 gene. It is located in nucleus and ubiquitous expression in spleen and lymph node. The calculated molecular weight of MEN1 is 68 kDa. Its inactivation has been implicated in tumors of many endocrine tissues. Germline inactivating mutations of MEN1 gene are the main cause of multiple endocrine neoplasia type 1 (MEN1), a syndrome characterized by tumors in the pituitary gland, the parathyroid glands, and the enteropancreatic neuroendocrine tissues. Recent study shows astroglia menin deficiency leads to depressive-like behaviors in mice.
